ABOUT ME

I am a back-end developer that focus on reliable yet creative ways to solve problems. Aside my problem solving skills, I am passionate towards open-source development, which I try to improve while developing my own skillset.

WORK EXPERIENCE

Python Developer@DataReal **REMOTE**

MARCH 2020 - MAY 2021

I've built applications using Python, Svelte and Golang on the AWS, maintained and delivered new and existing applications. Patched bugs and documented all software development.

Back-end analyst @WATTIO **REMOTE & PRESENTIAL**

JUNE 2021 - NaN

I've created features on existing applications using Python, Typescript, Golang, Docker and more, all being hosted and running on AWS. Collaborated on the codebase hosted on GitHub with a team of more than 10 people.

PROJECTS

blockchain github.com/jakoritarleite/blockchain

A simple peer-to-peer Blockchain implementation, done in Rust just for fun.

svcontent github.com/jakoritarleite/svcontent

A decentralized app where people provide visually stimulating content links, built using Rust and the Solana blockchain.

Adara github.com/adara-project/platform_manifest

An Android custom ROM based on the AOSP and LineageOS, it's focus is to be simple, minimalist, beautiful and stable. Currently archived because this project is very time consuming.

EDUCATION

Ctrl+Play - Escola de Programação e Robótica

2017 - 2020

Energy Engineering@UNIFEI/Federal University of Itajubá

2020 - NaN
